

Nursing Facility MDS Record Selection and Case Mix Calculation SFY 2006, Quarter 2 (October 2005)

The following is a brief overview of the steps involved in calculating the case mix for each NF beginning in State FY2006 Q2:

1. Obtain an updated list of Medicaid NF residents with an add-on rate from the Resident Assessment team. Import new records into the “AddOnRateRecipients” table.
2. Make a copy of the previous quarter’s case mix calculation database for use in the new period – rename it to fit the new period.
3. Clear prior period data tables in the new (copied) DB.
 - a. MdsAllData
 - b. MdsAllData_Excluded_IntensiveSkilled
 - c. MdsAllData_ExcludedAssessments_BadData
4. Append MDS data into the “MdsAllData” table and Update.
 - a. Append Discharge records to the “MdsAllData” table.
 - b. Append Assessment records to the “MdsAllData” table.
 - c. Update corrected assessments to Null values – except Assessment Internal ID.
 - i. This will remove assessments that have subsequently been corrected from the table so they are not counted twice.
 - d. Update Intensive Skilled assessment records to Null values – except Assessment Internal ID.
 - i. Remove records from the “MdsAllData” table if the assessment occurs while the person is receiving an “ISC” add-on rate amount. Append the removed records to the “MdsAllData_Excluded_IntensiveSkilled” table for reference.
5. Calculate the RUG days by entering the “period of interest” dates on the MS Access form and clicking the calculate days button.
 - a. Calculate Days button – This button will calculate the individual RUG days by executing Visual Basic code (see Appendix A) for the period of interest against the “qryGetData” query which contains the following data:
 - i. FacilityMedicaidID (Sort1)
 - ii. SSN (Sort2)
 1. Filter:

- a. Is Not Null And
- b. Not Like "-*" And
- c. Not Like " " And
- d. Not Like " "
- iii. AdmitDate
- iv. AssessmentDate (Sort3)
 - 1. This is a calculated field and is determined as follows:
 - a. IIf(IsNull(MdsAllData.AssessmentDate), MdsAllData.DischargeDate, MdsAllData.AssessmentDate)
- v. DischargeDate
- vi. StateCalculatedMedicaidRUG
- vii. AssessmentInternalID (Sort4)
- viii. MedicareCodeQualifier
- ix. ResidentMedicaidID
- x. Caid – True/False

1. This is a calculated field and is determined as follows:

- a. IIf((MdsAllData!MedicareCodeQualifier="6" Or MdsAllData!MedicareCodeQualifier Like " "), (IIf((Left(MdsAllData!ResidentMedicaidID,1)="+" Or Len(MdsAllData!ResidentMedicaidID)=10), True, False)), False)

b. The results of this VB script are written to the “tblResults” table.

6. Validate that no resident has more total days than is possible in the period of interest. If a resident is found to have more days, then remove that residents data from the “MdsAllData” table and append it to the “MdsAllData_ExcludedAssessments_BadData” table and rerun the case mix calculation as noted in #4 above.

7. Sum the RUG days by RUG as follows:

- a. FacilityName (Group By)
- b. FacilityMedicaidID (Group By)
- c. RUG (Group By)
- d. Weight (Group By)
- e. Days (Sum)
- f. WgtXDays: [Weight]*[Days] (Expression)

8. Sum the RUG days by facility as follows:

- | | |
|---|--------------|
| a. FacilityMedicaidID | (Group By) |
| b. FacilityName | (Group By) |
| c. TotalDays: Sum(tblResults_DaysRugs_Sum!Days) | (Expression) |
| d. SumWgtXDays: WgtXDays | (Sum) |
| e. CaseMix: [SumWgtXDays]/[TotalDays] | (Expression) |

Notes:

- This version of the Case Mix calculation uses non-Medicaid assessment data only for a prior assessment/discharge date(s) and/or the prior assessment RUG score.
- MDS Section AA, question 8b (Codes for assessments required for Medicare PPS or the State) – Any value other than “6” or Null (blank or a space) is a Medicare assessment and would not be included in a Medicaid case mix calculation.
- ResidentMedicaidID – In addition to AA8B, this field is used to help in determining if a resident is Medicaid eligible.

Minimum Data Set (MDS) – Version 2.0 instructions for Section AA, question 7 states the following: “Medicaid No. [“+” if pending, “N” if not a Medicaid recipient].” There is a further note, via asterisk, that the field is a key item for computerized resident tracking.

We have noted quite a variety of responses in this field that do not follow the instructions for data entry. (Examples: APPLY, D, N/A, NONE, NON3E, P, PENDING, ZHC...) We have also noted many instances where the SSN was used in the ResidentMedicaidID field. Going forward, new assessment records will not be added to our DB where

- AA8B is other than “6” or Null **and**
 - ResidentMedicaidID is other than a 10-digit numeric or a “+” (the quotation marks would not actually be included in the field).
- Also refer to 5.a.x.1.a above for the syntax in determining whether an assessment is considered a Medicaid record.

RUG Calculation Translation:

Is it a new person?

No –

Is there an admit date?

Yes –

Is the admit date later than the last assessment date?

Yes –

Is there a current RUG?

Yes – Use the current RUG

No – Use a default value

No –

Is there a previous RUG?

Yes – Use the previous RUG

No – Use a default value

No –

Is there a previous RUG?

Yes – Use the previous RUG

No – Use a default value

Yes –

Is there a current RUG?

Yes – Use the current RUG

No – Use a default value

Appendix A – MDS Case Mix Calculation Syntax

- Use Medicaid records and prior – non-Medicaid payor – records as needed for RUG
- Use the maximum date between Admit and the last Assessment/Discharge date

This routine writes the data to the results table.

```
Private Sub WriteResult(ByVal strFacility_toWrite As String, ByVal strSSN_toWrite As String, ByVal dtmBegin As Date, ByVal dtmEnd As Date, ByVal intDays As Integer,
ByVal strRUG_toWrite As String, ByVal strAssessmentID_toWrite As String)
    DoCmd.RunSQL "INSERT INTO tblResults(FacilityMedicaidID, SSN, dtmBegin, dtmEnd, intDays, strRUG, strAssessmentId)VALUES('" & strFacility_toWrite & "', '" &
strSSN_toWrite & "', #" & dtmBegin & "#, #" & dtmEnd & "#, " & intDays & ", '" & strRUG_toWrite & "', '" & strAssessmentID_toWrite & "')"
End Sub
```

This function determines the appropriate RUG to use.

```
Private Function DetermineRUG(ByVal blnNew As Boolean, ByVal dtmAdmit As Date, ByVal dtmAssessmentLast As Date, ByVal strRUG As String, ByVal strRUGLast As
String, ByVal strDefault As String) As String
    If Not blnNew Then
        If Not IsNull(dtmAdmit) Then
            If dtmAdmit > dtmAssessmentLast Then
                If strRUG <> "" Then
                    DetermineRUG = strRUG
                Else
                    DetermineRUG = strDefault
                End If
            Else
                If strRUGLast <> "" Then
